Child Theme & Plugin Installation & Activation

1. Unzip RoyalCommerce Download Package to the desktop of your computer.
2. Install & Activate the RoyalCommerce Theme to your WordPress website.
3. Install & Activate the following plugins from the WordPress Repository:
    1. WooCommerce — https://wordpress.org/plugins/woocommerce/ *Go Through WooCommerce Set Up wizard*
    2. Advanced AJAX Product Filters for WooCommerce — https://wordpress.org/plugins/woocommerce-ajax-filters/
    3. Q2W3 Fixed Widget — https://wordpress.org/plugins/q2w3-fixed-widget/
    4. Widget Importer & Exporter — https://wordpress.org/plugins/widget-importer-exporter/
    5. WP WooCommerce Image Zoom — https://wordpress.org/plugins/wp-image-zoooom/
    6. YITH WooCommerce Wishlist — https://wordpress.org/plugins/yith-woocommerce-wishlist/

4. Upload, Install and Activate the following plugins that are bundled with RoyalCommerce:

   1. divi-logo-swap.zip
   2. woocommerce-quick-view-pro.zip
   3. divi-product-carousel-module.zip

Content Importing

1. Import Content:
   1. Navigate to Tools > Import, and Click on WordPress from the bottom of the list. (Install and activate plugin, if it's not already).
   2. Click "Choose File" and select **all-content.xml** from the RoyalCommerce download package.
   3. Select your username from the dropdown(s) to assign the content to yourself. Be sure to "tick" the box for "Download and import file attachments."
2. Next, navigate to Settings > Reading, and Select "A static page" for the "Front page display" setting. Next, select "Home." After you select a homepage, be sure to click "Save Changes."
3. Next, navigate to Appearance > Menus. In the dropdown "Select a menu edit:" select "Main Menu" (then click the the "Select" button). At the bottom, under "Menu Settings" tick the box for "Primary Menu" then click the "Save Menu" button.

4. Divi Builder Layout Import:
    1. Navigate to Divi > Divi Library, and we'll import the Divi Builder Layouts.
    2. Click on Import & Export at the top left of the screen. Select Import from the modal window, and click "Choose File." Select **Builder-Layouts.json** from the RoyalCommerce download package, and then click import.
5. Add Layouts to Pages:
    1. Click on Pages > Home, then click the "Use Divi Builder" button.
    2. Next, click "Load from Library" and then click on "Add From Library." You can now select the homepage layout that you would like to use. RoyalCommerce Homepage (With Product Sliders) is the default homepage and the other two are the alternates that can be seen in the Home dropdown on the RoyalCommerce demo website: https://royalcommerce.timstrifler.com
    3. Next, you'll repeat the above step for each of the pages, adding the respective layout for each page. Be sure to keep the box checked for replacing the existing content. NOTE: there is no layout for the Checkout page for user experience purposes while shoppers are checking out.

6. Divi Theme Settings Import:
    1. Navigate to Divi > Divi Theme Options
    2. Next, click on the Up and Down Arrows icon in the upper right corner of the settings panel.
    3. Now click Import from the modal window that pops up.
    4. Click "Choose File" and select **Theme-Options.json** from the RoyalCommerce download package. Then click import.
7. Customizer Settings Import:
    1. Navigate to Divi > Theme Customizer
    2. Click the Up and Down Arrows icon and we'll do the same as before. But this time, select **Customizer-Settings.json** from the download package, then click import.
    3. NOTE: You may notice (on the front end) that the magnifier icon (aka search icon) in the upper right corner of the website is being obstructed by the Wishlist heart icon. To fix this, (within the Theme Customizer) navigate to Header & Navigation > Header Elements. Tick the box for "Show Search Icon." then click the Save & Publish button at the top. Now, un-tick the same box and Save again. This will fix the issue.
    4. If you'd like to use the styling from Demo 2, import **STYLE 2-Customizer Settings.json** instead. NOTE: Due to how Divi styles the sale icon on products, you have to manually add the color for the sale icon. To do this, navigate to Divi > Theme Options, and add #ffa200 to the background in the Custom CSS section in the appropriate section at the top where it says, "Change Background Color Below to Change "On Sale" Tag for Products."

8. Widget Import:
    1. Navigate to Tools > Widget Importer & Exporter
    2. Click "Choose File." Select **widgets.wie** then click "Import Widgets." Be sure to navigate to Appearance > Widgets, and remove the default Sidebar widgets. Everything above the "WooCommerce Cart" widget should be deleted.

Plugin Configuration

For the last section of configuration, we need to tweak a few settings in our plugins.

1. Quick View:
    1. Navigate to Phoeniixx > Quick View and tick the box for "Disable Quick View on Mobile.
    2. Next, un tick the box for "Enable product navigation on quick view. Click Save Changes.
    3. Click on the "Product" tab next (still within the Quick View settings area). Un tick the boxes for Show Product Excerpt and Show Product Meta. Then, in the dropdown, for "Select Thumbnails Type," select "Classic Mode." Then click "Save Changes" at the bottom.

2. Fixed Widget (for Sticky Cart):
    1. Navigate to Appearance > Fixed Widget Settings and make your settings page look like below:

Fixed Widget Options

General Options

Margin Top:	85	px
Margin Bottom:	20	px
Refresh interval:	1500	milliseconds / Set 0 to disable.
Screen Max Width:	980	px / Plugin will be disabled when browser window width equals or less then specified value

Compatibility

Auto fix widget id:	☑	
Enable plugin for logged in users only:	☐	Enable this option for debug purposes (frontend problems and etc.)
Inherit widget width from the parent container:	☐	Enable this option for themes with responsive sidebar
Use jQuery(window).load() hook:	☐	Enable this option only if you have problems with other scroll oriented javascript code
widget_display_callback hook priority:	30 ⇕	

Custom IDs

Custom HTML IDs (each one on a new line):

Don't forget to click Save!

3. WP Image Zoom:

   1. Next, navigate to WP Image Zoom and under Zoom Settings, select the X for step one (first option). Then, under Step 3

(Cursor Type) Select the Crosshairs (third option). Then click save!

4. Divi Logo Swap: Lastly, add your secondary logo on scroll by going to Appearance > Divi Logo Swap, and uploading an image to the secondary logo section. No need to add a logo to primary logo section, as our logo is already added in the Divi Theme Options.

And we're done!
